CONTENTS

Preface.................................................................................................................................................. 9

INTRODUCTION
The Signs of Post-Fossil Transition in the Energy Landscapes along the River Danube
Márta Somogyvári ................................................................................................................................. 19

SYSTEMIC COMPONENTS AND CONSTRAINTS
The Role of Renewable Energy in the Energy Network System of the Danube Region
Tamás János Katona ................................................................................................................................ 35
Modelling the Integration of Large Energy Storage in the Alpine Region
Mathis Buddeke, Christine Krüger, Arjuna Nebel Frank Merten..................................................... 46
Ideas of the Renewable Energy in Climate-Strategies of Medium-Size Hungarian Cities
Edit Hoyk, András Donát Kovács and Jenő Zsolt Farkas...................................................................... 55
Overview and Perspectives of Renewable Energy Sources in the Danube Region in Croatia
Anton Spajić, Stanislav Vezmar, Danijel Topić and Damir Šljivac....................................................... 64

SOCIAL DOMAIN
Social Aspects and Challenges of Renewable Energy Usage
László Berényi........................................................................................................................................ 81
The Theory of Environmental Modernization and its Feasibility
Application in Capitalist Economy. The Case of Renewable Energy Diffusion in Romania
Dragos Constantin Sanda..................................................................................................................... 88
An analysis of Social Effects of Climate and Energy Usage Modernization: Romanian Green Labor Market
Alexandra Luana Sanda (Smarandoiu).................................................................................................. 96

ECONOMIC DOMAIN
Note on the Economics of Renewable Energy Technologies in the Danube region
Nikolett Deutsch, Éva Pintér ................................................................................................................ 107
Romanian Electricity Market in the Light of Fast Development of Renewable Energies: General Presentation and Critical Assessment
Sorin Cebotari 113

Joint Renewable Energy Support Schemes in the Visegrád Countries
Éva Szabina Somossy, Tamás Tóth 125

HYDROPOWER POTENTIAL
Hydro Energy Potential in the Danube Region and in Hungary
István Szeredi 139

WIND RESOURCES
Perspectives of Wind Energy in the Danube Region
Dr. Ildikó Dobi Wantuch 151

Optimization of Wind Farm Location Planning with GIS Methods Based on a Hungarian Case Study Area (Csongrád County)
Nándor Csikós, Péter Szilassi 154

The Limits to Wind Energy in Hungary – the Geographical Aspect
Béla Munkácsy, Ádám Harmat, Dániel Meleg 166

Statistical Estimation of the Next Day’s Average Wind Speed and Wind Power
Károly Tar, István Lázár and Renáta Gyarmati 174

GEOTHERMAL RESOURCES
Untapped Potentials and Enhanced Use of Deep Geothermal Energy in the Danube Region
Annamária Nádor, Szilárd Árvay 195

General overview of RES, focusing on the geothermal energy
Klára Szita Tóth, Anna Vizkeleti 204

Geothermal energy applications developed in Bihor County and at University of Oradea
Mircea Gordan, Cristian Vancea, Cornelia Gordan, Maria Bittenbinder, Monica Costea 216

Thermal Water Utilization and its Possible Development in the Early 21st Century in Hajdúság, East Hungary
Erika Bódi, Tamás Buday, Réka Lilla Kovács, Richard William McIntosh and Miklós Kozák 227

Effect of the Solar Radiation on Underground Temperature Values and Heat Supply Around a Ground Coupled Heat Pump Based on Meteorological Data, Debrecen
Tamás Buday, István Lázár, Gergely Csákberényi-Nagy, Erika Bódi and Tamás Tóth 239
Utilizing Geothermal Energy in Hungary Today
Lajos Gőőz ........................................................................................................... 251

SOLAR RESOURCES
Solar Energy Resources in the Danube Region
Damir Šljivac ........................................................................................................ 257
Decreasing negative ecological impacts of PV farms: identification of suitable areas in Hungary
Lea Végh ................................................................................................................. 267
Cost-Benefit Analysis of Different Photovoltaic Systems in Croatia, Hungary, Serbia and Slovenia
Denis Pelin, Sándor Zsolt Kovács, Andrea Suvák, Damir Šljivac, Danijel Topić ......................................................... 278
Applying Solar Energy for Water Heating – a Case Study at a Secondary School in Croatia
Marinko Stojkov, Krunoslav Hornung, Ante Čikić, Dražan Kozak, Damir Šljivac, Danijel Topić ................................................................. 291

BIOMASS RESOURCES
Sugar Beet as a Potential Energy Crop in the Danube Region
László Potyondi ..................................................................................................... 307
Reed as a Biomass Resource in the Danube Region – An Assessment of Potentials and Different Utilization Possibilities for Energy Production in Austria
Jürgen Krail, Hannes Kitzler, Georg Beckmann, Helmut Plank, Christoph Pfeifer and Doris Rixrath .................................................. 318
Evaluating the Market Competitiveness of Reed Based Biofuels
Doris Rixrath, Jürgen Krail and Arne Ragossnig ................................................. 335
Biomass transportation into power plants – calculation method of transportation distances
Gábor Pintér ............................................................................................................. 348

Editors .................................................................................................................. 357
